DRAFT

Document for a Standard Message-Passing Interface

Message Passing Interface Forum

February 14, 2015
This work was supported in part by NSF and ARPA under NSF contract CDA-9115428 and Esprit under project HPC Standards (21111).

This is the result of a LaTeX run of a draft of a single chapter of the MPIF Final Report document.

Chapter 15

Deprecated Functions

15.1 Deprecated since MPI-2.0

The following function is deprecated and is superseded by MPI_COMM_CREATE_KEYVAL in MPI-2.0. The language independent definition of the deprecated function is the same as that of the new function, except for the function name and a different behavior in the C/Fortran language interoperability, see Section 17.2.7. The language bindings are modified.

MPI_KEYVAL_CREATE(copy_fn, delete_fn, keyval, extra_state)

IN	copy_fn	Copy callback function for keyval
IN	delete_fn	Delete callback function for keyval
OUT	keyval	key value for future access (integer)
IN	extra_state	Extra state for callback functions

For this routine, an interface within the mpi_f08 module was never defined.

```
MPI_KEYVAL_CREATE(COPY_FN, DELETE_FN, KEYVAL, EXTRA_STATE, IERROR)
EXTERNAL COPY_FN, DELETE_FN
INTEGER KEYVAL, EXTRA_STATE, IERROR
```

The copy_fn function is invoked when a communicator is duplicated by MPI_COMM_DUP. copy_fn should be of type MPI_Copy_function, which is defined as follows:

A Fortran declaration for such a function is as follows: For this routine, an interface within the mpi_f08 module was never defined.

SUBROUTINE COPY_FUNCTION(OLDCOMM, KEYVAL, EXTRA_STATE, ATTRIBUTE_VAL_IN, ATTRIBUTE_VAL_OUT, FLAG, IERR)

 INTEGER OLDCOMM, KEYVAL, EXTRA_STATE, ATTRIBUTE_VAL_IN, ATTRIBUTE_VAL_OUT, IERR LOGICAL FLAG

copy_fn may be specified as MPI_NULL_COPY_FN or MPI_DUP_FN from either C or FORTRAN; MPI_NULL_COPY_FN is a function that does nothing other than returning flag = 0 and MPI_SUCCESS. MPI_DUP_FN is a simple-minded copy function that sets flag = 1, returns the value of attribute_val_in in attribute_val_out, and returns MPI_SUCCESS. Note that MPI_NULL_COPY_FN and MPI_DUP_FN are also deprecated.

Analogous to copy_fn is a callback deletion function, defined as follows. The delete_fn function is invoked when a communicator is deleted by MPI_COMM_FREE or when a call is made explicitly to MPI_ATTR_DELETE. delete_fn should be of type MPI_Delete_function, which is defined as follows:

```
typedef int MPI_Delete_function(MPI_Comm comm, int keyval,
void *attribute_val, void *extra_state);
```

A Fortran declaration for such a function is as follows: For this routine, an interface within the mpi_f08 module was never defined.

SUBROUTINE DELETE_FUNCTION(COMM, KEYVAL, ATTRIBUTE_VAL, EXTRA_STATE, IERR)
INTEGER COMM, KEYVAL, ATTRIBUTE_VAL, EXTRA_STATE, IERR

delete_fn may be specified as MPI_NULL_DELETE_FN from either C or FORTRAN; MPI_NULL_DELETE_FN is a function that does nothing, other than returning MPI_SUCCESS. Note that MPI_NULL_DELETE_FN is also deprecated.

The following function is deprecated and is superseded by MPI_COMM_FREE_KEYVAL in MPI-2.0. The language independent definition of the deprecated function is the same as of the new function, except of the function name. The language bindings are modified.

```
MPI_KEYVAL_FREE(keyval)
```

INOUT keyval

Frees the integer key value (integer)

```
int MPI_Keyval_free(int *keyval)
```

For this routine, an interface within the mpi_f08 module was never defined.

The following function is deprecated and is superseded by MPI_COMM_SET_ATTR in MPI-2.0. The language independent definition of the deprecated function is the same as of the new function, except of the function name. The language bindings are modified.

MPI_ATTR_PUT(com	m, keyval, attribute_val)
------------------	---------------------------

 ${\color{blue} {\sf INOUT}} \qquad \qquad {\color{blue} {\sf communicator}} \ {\color{blue} {\sf to}} \ {\color{blue} {\sf will}} \ {\color{blue} {\sf be}} \ {\color{blue} {\sf attribute}} \ {\color{blue} {\sf will}} \ {\color{blue} {\sf be}} \ {\color{blue} {\sf attribute}} \ {\color{blue} {\sf will}} \ {\color{blue} {\sf be}} \ {\color{blue} {\sf attribute}} \ {\color{blue} {\sf will}} \ {\color{blue} {\sf be}} \ {\color{blue} {\sf attribute}} \ {\color{blue} {\sf will}} \ {\color{blue} {\sf be}} \ {\color{blue} {\sf attribute}} \ {\color{blue} {\sf vision}} \ {\color{blue} {\sf attribute}} \ {\color{blue} {\sf vision}} \ {\color{blue} {\sf attribute}} \ {\color{blue} {\sf attribute}} \ {\color{blue} {\sf vision}} \ {\color{blue} {\sf vision}} \ {\color{blue} {\sf attribute}} \ {\color{blue} {\sf vision}} \ {\color{blue} {\sf attribute}} \ {\color{blue} {\sf vision}} \ {\color{blue} {\sf attribute}} \ {\color{blue} {\sf attribute}}} \ {\color{blue} {\sf attribute}} \ {\color{blue} {\sf attribute}} \ {\color{blue} {\sf attribute$

dle)

IN keyval key value, as returned by

MPI_KEYVAL_CREATE (integer)

IN attribute_val attribute value

int MPI_Attr_put(MPI_Comm comm, int keyval, void* attribute_val)

For this routine, an interface within the mpi_f08 module was never defined.

MPI_ATTR_PUT(COMM, KEYVAL, ATTRIBUTE_VAL, IERROR)
INTEGER COMM, KEYVAL, ATTRIBUTE_VAL, IERROR

The following function is deprecated and is superseded by MPI_COMM_GET_ATTR in MPI-2.0. The language independent definition of the deprecated function is the same as of the new function, except of the function name. The language bindings are modified.

MPI_ATTR_GET(comm, keyval, attribute_val, flag)

IN comm	communicator to which attribute is attached (handle)
IN keyval	key value (integer)
OUT attribute_val	attribute value, unless $flag = false$
OUT flag	true if an attribute value was extracted; false if no attribute is associated with the key

int MPI_Attr_get(MPI_Comm comm, int keyval, void *attribute_val, int *flag)

For this routine, an interface within the mpi_f08 module was never defined.

MPI_ATTR_GET(COMM, KEYVAL, ATTRIBUTE_VAL, FLAG, IERROR)
INTEGER COMM, KEYVAL, ATTRIBUTE_VAL, IERROR
LOGICAL FLAG

The following function is deprecated and is superseded by MPI_COMM_DELETE_ATTR in MPI-2.0. The language independent definition of the deprecated function is the same as of the new function, except of the function name. The language bindings are modified.

MPI_ATTR_DELETE(comm, keyval)

INOUT	comm	communicator to which attribute is attached (handle)
IN	keyval	The key value of the deleted attribute (integer)

int MPI_Attr_delete(MPI_Comm comm, int keyval)

For this routine, an interface within the mpi_f08 module was never defined.

MPI_ATTR_DELETE(COMM, KEYVAL, IERROR)

INTEGER COMM, KEYVAL, IERROR

15.2 Deprecated since MPI-2.2

The entire set of C++ language bindings have been removed. See Chapter 16, Removed Interfaces for more information.

The following function typedefs have been deprecated and are superseded by new names. Other than the typedef names, the function signatures are exactly the same; the names were updated to match conventions of other function typedef names.

Deprecated Name	New Name
MPI_Comm_errhandler_fn	MPI_Comm_errhandler_function
MPI_File_errhandler_fn	MPI_File_errhandler_function
MPI_Win_errhandler_fn	MPI_Win_errhandler_function
